

# LAYING THE GROUNDWORK FOR A STRONG FOUNDATION

Adding Grounded to your soil-applied herbicides lays the groundwork for a strong foundation of pre-emergent weed control.

**Grounded** is a soil and spray deposition agent that improves the efficacy and adsorption of soil-applied herbicides, improves drift control and enhances application efficiency. With Grounded, you get proven quality and performance that can improve results from your herbicide inputs.

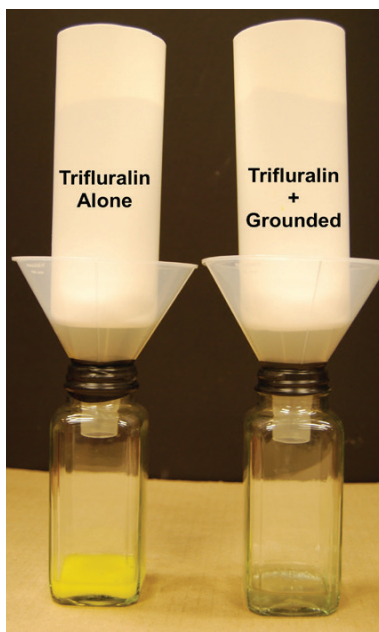

To strengthen your foundation, ask your Helena representative about Grounded.

## Grounded Product Highlights

- Improves pre-emergent weed control
- Improves adsorption in the soil
- Keeps ai in the weed kill-zone longer
- Enhances application efficiency
- Improves droplet size uniformity
- Reduces evaporation and drift

*Laying the Foundation*

# GROUND<sup>ED</sup>

On the left, Trifluralin alone & Trifluralin with Grounded were applied to sand in the columns above the glass containers. Equal amounts of water were then poured into both sand-filled columns. Note the color of the captured leachate of Trifluralin alone vs. Trifluralin with Grounded. This demonstrates that Grounded improves the soil adsorption of soil-applied herbicides, providing a strong foundation for soil weed control.
