Inspector Comment:

COGCC Integrity Inspector Joe Maclaren met with ConocoPhillips Lead Supervisor Ramon Florez and conducted an engineering integrity (flowline only) inspection on 6/7/2016. This field inspection was conducted in response to an initial form 19 spill report Doc #401040012 filed with the COGCC on 05/09/16 that stated the following: Water was bubbling up from the ground; The dumpline from separator had leaked and operations are being made to replace dumpline as soon as possible. CPC personnel and contractors were in the process of finding the location of the point source of release and determining the root cause of the produced water line failure at the time of this field inspection. The Actions Required identified during this field inspection are outlined in the equipment/ flowline section of this report. Photos have been uploaded and can be accessed via link(s) at end of report. Note: This is an Engineering Integrity (Flowline) field inspection only; all Actions Required identified on previous COGCC field/ reclamation inspections must be completed as outlined.

Comment	Excavation near the separator has exposed flowlines associated with this well; The point source of leak/ release from the produced water dump flowline between the separator and production tanks has been identified; The root cause of flowline failure is under investigation and preparations are being made to repair/ replace the flowline (at the time of this field inspection).			
Corrective Action	As discussed with ConocoPhillips personnel on location: Provide a written description of root cause of flowline failure and flowline repairs completed; Outline how a re-occurring failure/ release (on produced water dump flowline) will be prevented; Perform flowline pressure testing (post repair/ prior to returning well to production) and email data/ chart and description information to COGCC Integrity Group at joe.maclaren@state.co.us .
