Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During routine operations at the Kerr 29C-12HZ well, a flowline failure was discovered. Approximately 1 barrel of oil surfaced above the flowline approximately 360 feet west of the wellhead. Excavation and cleanup activities are ongoing at the site. Confirmation soil samples will be collected from the excavation and submitted for laboratory analysis of TPH, BTEX, pH, EC, and SAR (if applicable). The analytical results and excavation details will be provided in a supplemental report. A topographic Site Location Map showing the general location of the release is attached as Figure 1.

Secondary containment, including walls & floor regardless of construction material, must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.

A Form 15 Pit Report shall be submitted within 30 calendar days after the construction of an emergency pit

Impacted Media (Check all that apply) Soil Groundwater Surface Water Dry Drainage Feature

Surface Area Impacted: Length of Impact (feet): 16 Width of Impact (feet): 15

Depth of Impact (feet BGS): 6 Depth of Impact (inches BGS): _____

How was extent determined?

On March 26, 2016, four sidewall soil samples (N01@4', E01@4', S01@4', and W01@4') and one base soil sample (B01@6') were collected from the excavation and submitted for laboratory analysis of TPH, BTEX, pH, and EC. Laboratory analytical results indicated that TPH, BTEX, pH, and EC levels were in compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Approximately 50 cubic yards of impacted soil were excavated and transported to the Buffalo Ridge Landfill in Keenesburg, Colorado, for disposal. The general site layout, release location, excavation dimensions, and soil sample locations are depicted on the Excavation Site Map provided as Figure 2. The soil sample analytical results are summarized in Table 1 and the laboratory analytical report is attached.

Soil/Geology Description:

Poorly graded fine-grained sand (SP)

Depth to Groundwater (feet BGS) 20 Number Water Wells within 1/2 mile radius: 25

If less than 1 mile, distance in feet to nearest Water Well 520 None Surface Water 770 None

Wetlands 750 None Springs 3100 None

Livestock 3100 None Occupied Building 700 None

Additional Spill Details Not Provided Above:

No further action is required. Laboratory analytical results for the confirmation soil samples indicate that TPH, BTEX, pH, and EC levels are in compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Based on the confirmation soil sample analytical results, Kerr-McGee is requesting an NFA status for this site.
