Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Contractor failed to properly connect a hose to the trailer-mounted pump. The hose vibrated loose and approximately 3 bbls of produced water was spilled outside of secondary containment. The spill was caught immediately and the pumping operation was shut down. A vac pod was used to capture 90 - 95% of the fluid. Everything was contained on pad. There were no off-site release, or other environmental impacts. The contractor is working with a spill response contractor to characterize and clean-up any impacted soils to comply with COGCC 910-1 clean-up standards.
