Doc # 01625235

Good morning Katrina,

Happy Friday!

Crescent Point Energy recently submit our first round of permits to the COGCC back in May/June. Doug Andrews reached out to me regarding CPE's intention to use salt based mud in the drilling program section on our Form 2As. After discussions with our drilling and engineering teams, we've determined that salt based mud will in fact **not** be used. Doug has updated the Form 2As accordingly and I want to make sure the change is also reflected in the Form 2. The following wells/Form 2s need to be revised to indicate that salt based mud will **not** be used:

Is this something I can adjust on our end or does this change need to be made by COGCC staff?

Thank you in advance for your help!

Have a great weekend,

Lauren
