Compliance Summary:

QtrQtr: NWSW Sec: 32 Twp: 7N Range: 65W

Inspector Comment:

COGCC Environmental Inspection of reported spill ID# 425492. Operator reported spill after dumpline test failure. Reporting and remediation of the release appears in compliance with Rule 906. Operator shall submit a Supplemental spill report with final soil volume disposed, and the results of confirmation soil sampling.

Wildlife BMPs:

BMP Type	Comment
Planning	When feasible develop multiple well sites by using directional drilling to reduce cumulative impacts and adverse impacts on wildlife resources.
Drilling/Completion Operations	Use a closed-loop drilling mud system to preclude the use of an earthen reserve pits when available.
Drilling/Completion Operations	Temporary engineering controls will be implemented, as ,to mitigate nuisance noise to nearby residences and may include the following where appropriate or necessary: (1) perimeter sound walls on well pad locations during construction; (2) dawn to dusk operations for completion operations to eliminate noise at night for fracing; (3) mufflers on high noise output machinery; (4) generator skids and mud pumps; and (5) stationary engines and their exhausts located and oriented to direct noise away from the homes closest to well pad locations.
Planning	Bayswater will conform to all county rules and regulations for traffic control and planning.
Site Specific	Fence the well site after drilling to restrict public and wildlife access. Keep well site location, the road, and the pipeline easement free of noxious weeds, litter and debris. Spray for noxious weeds, and implement dust control, as needed. Bayswater Exploration and Production, LLC will not permit the release or discharge of any toxic or hazardous chemicals or wastes on Owner's Land. Construct and maintain gates where any roads used by Bayswater Exploration and Production, LLC cross through fences on the leased premises.
Storm Water/Erosion Control	Bayswater will include a section of larger rock (tracking pad) at the entrance (100'). If necessary street sweeping will be scheduled and completed.
Drilling/Completion Operations	Bayswater will post a sign at the county road with contact information for the residents to call the operator with questions.
Interim Reclamation	Utilize only such area around each producing well as is reasonably necessary. Restore the remainder of the well site location to its original condition within a reasonable time after the completion of operations. All reseeding shall be done with grasses consistent with the Rocky Mountain native mix or other grasses reasonably requested by surface owner and during planting period suggested by Owner.
Final Reclamation	All surface restoration shall be accomplished to the satisfaction of Owner. All reseeding shall be done with grasses consistent with the Rocky Mountain native mix or other grasses reasonably requested by surface owner and during planting period suggested by Owner. Final reclamation shall be completed to the reasonable satisfaction of the Owner as soon as practical after installation (weather permitting) and in accordance with regulatory agency standards (BLM/COGCC).
Construction	Remove only the minimum amount of vegetation necessary for the construction of roads and facilities. Conserve topsoil during excavation and reuse as cover on disturbed areas to facilitate regrowth of vegetation. No construction or routine maintenance activities will be performed during periods when the soil is too wet to adequately support construction equipment.
Drilling/Completion Operations	Lighting abatement measures will be implemented and may include the following where appropriate or necessary: (1) rig oriented to direct light away from nearby residents; (2) install lighting shield devices on all of the more conspicuous lights; (3) lighting will be directed inward and downward to avoid glare on public roads and building units within 700 feet, except as deemed necessary by operator to illuminate other areas for safety reasons
Storm Water/Erosion Control	Use water bars, and other measures to prevent erosion and non-source pollution. Implement and maintain BMPs to control stormwater runoff in a manner that minimizes erosion, transport of sediment offsite, and site degradation. Co-locate gas and water gathering lines whenever feasible, and mitigate any erosion problems that arise due to the construction of any pipeline(s).
