

**SITING RATIONALE – BURGE 27C-2HZ  
S1/2 SE1/4 SECTION 2, TOWNSHIP 1N, RANGE 67W, 6TH P.M.**

Factors that impacted the placement of the production facility on this location:

Adjacent to existing facility

Utilizing existing road

Minimal interference with irrigation (runs west to east)

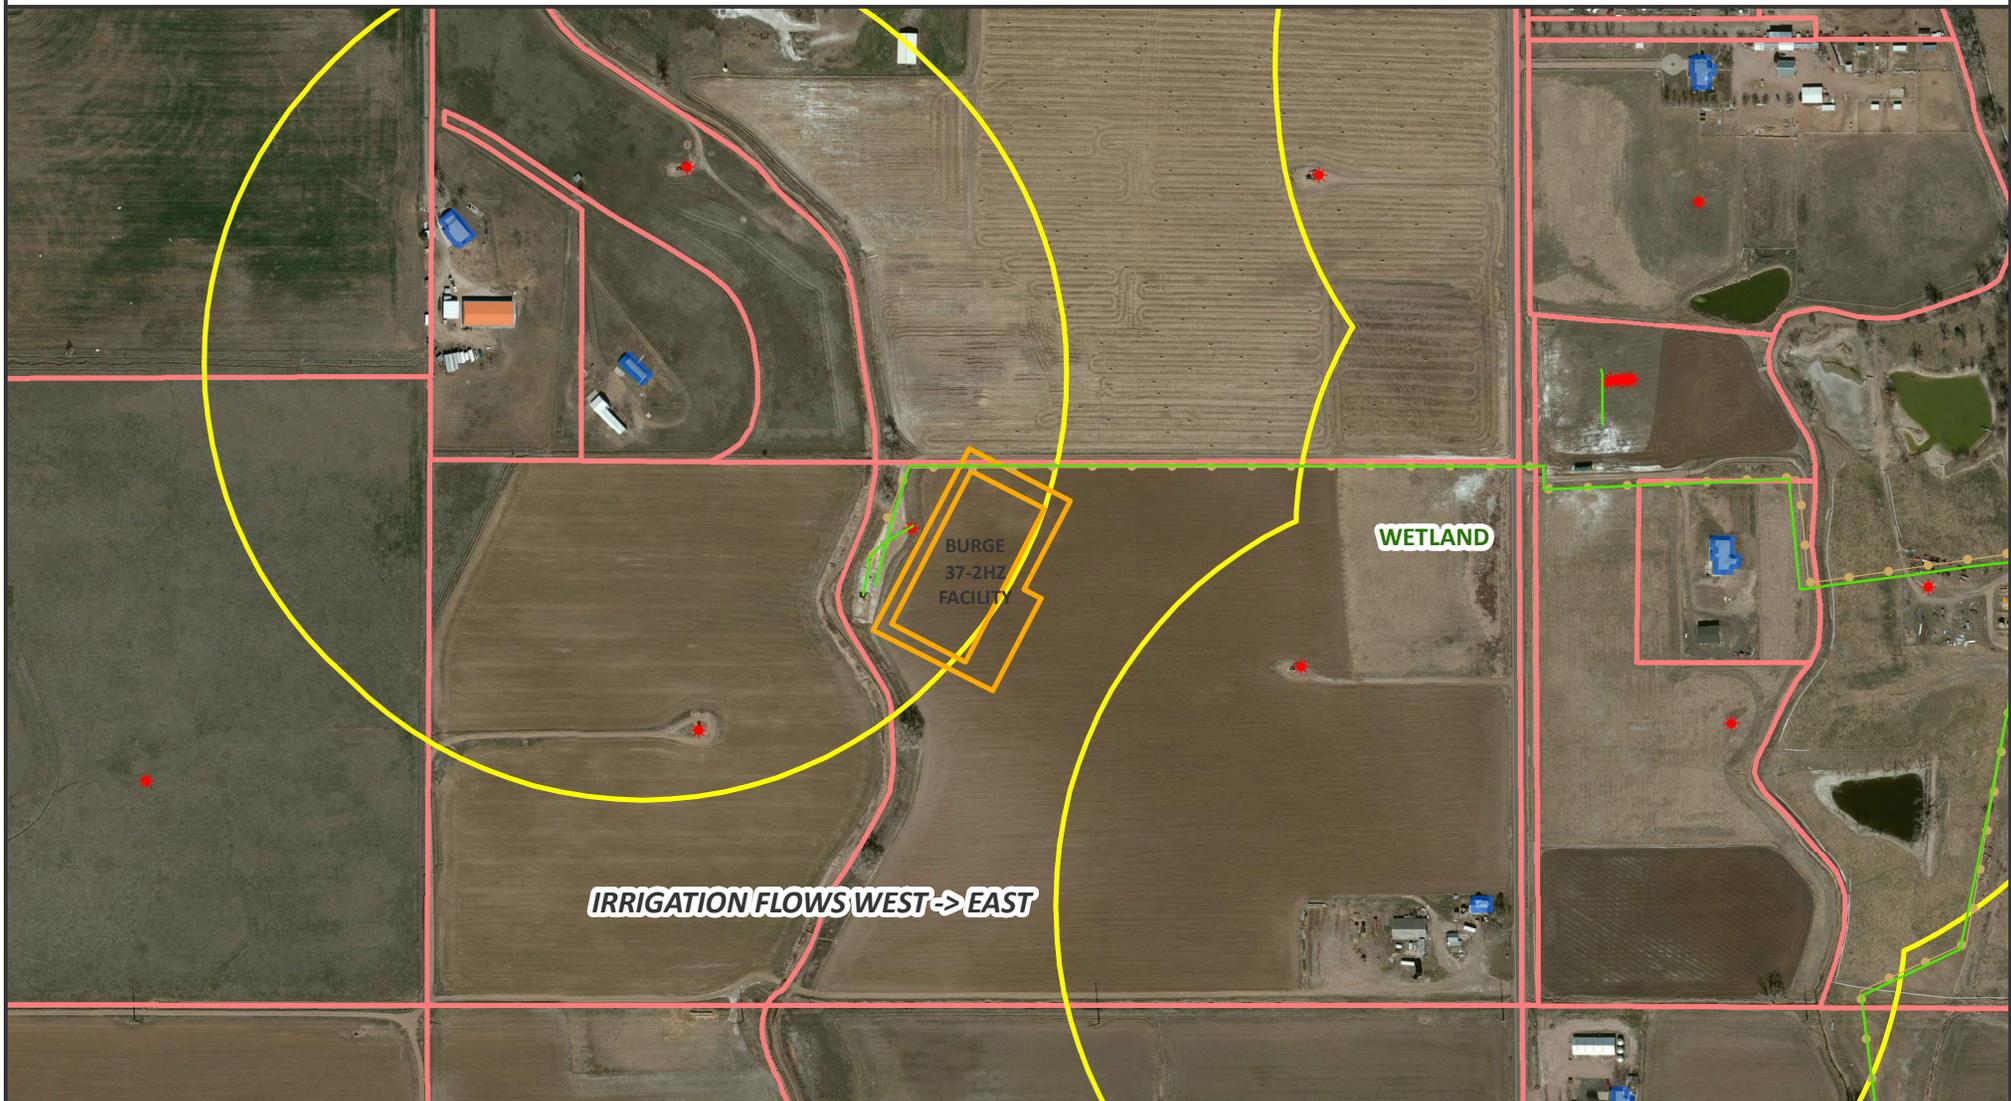

Building units surrounding location

Avoid wetland to the east on CR 23/east section line

The main factor in determining where to place this location was the existing facility and access road. In order to minimize surface disturbance, we positioned the facility adjacent to the existing location. The surface owner also requested that we put the facility as close to the property line as possible. By placing the facility on the northwestern portion of the parcel, we minimize the interference with the irrigation which runs west to east. We considered putting the facility closest to the eastern property line, but there is a wetland located in the northeast section of the parcel (please see map attached). The existing KPK well eliminated us from putting the facility closer to the middle of the parcel or to the east. There are also building units surrounding the location to the northwest, northeast, east and southeast.
