COGCC Comments

Comment	User	Date
Corrective Action: Remove all remaining debris on location, stabilize the unvegetated area and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. Revegetation activities shall be complete no later than 11/15/2016.	trujilloam	08/02/2016
Operator response to this inspection should be provided to the COGCC in the comments section of a Form 4 Sundry notice.		
Comment: Substantial stormwater erosion occurring on apill area. See attached photo documents	trujilloam	08/02/2016
Comment: Debris related to location still remains on site. See figures 9-11.	trujilloam	08/02/2016
Comment: This location does not meet reclamation regulations; insufficient vegetative cover. Records show historic pits on location had been open allowing for contamination and degradation to the adjacent grassland. Past inspections had required operator to reclaim the unvegetated and contaminated areas. After an on-the-ground inspection and review of historic imagery of the location, it has been determined that these corrective actions had not been addressed, and the unvegetated/contaminated areas have not been reclaimed. See Attached photo documents.	trujilloam	08/02/2016
