John,

I am writing regarding the Grassy Creek Coal Co 1-24 well that Bayless intends to plug.

I inspected the location yesterday and observed two areas that appear to have been pits.

- Pit 1, near the wellhead, approximately 20' from the wellhead, to the west. pit was dry, no observable hydrocarbon, no fluid.
- Pit 2, north west of the wellhead. Pit has fluid, no vegetative growth, no observable hydrocarbon.

These pit should demonstrate compliance to COGCC pit closure rule 905.

Please submit a Form 27, outlining the closure and sampling. Due to the nature of the well (gas producing well), COGCC table 910-1 may be amended to exclude PAH's and sampled for BTEX, TPH, metals and Inorganics.

Feel free to contact me with any questions.

Thanks,

Kris Neidel
