Dear Mr. Mickelson:

LT Environmental, Inc. (LTE) was contracted by Kerr-McGee Oil & Gas Onshore LP (Kerr-McGee) to conduct excavation oversight and subsurface assessment activities at the above-referenced site. The oversight activities included field screening of soil, confirmation soil sampling, subsurface excavation sloping, documenting field activities, and laboratory analytical results review.

In April 2016, two produced water sumps were removed during tank battery deconstruction activities. Soil with historical petroleum hydrocarbon impacts was encountered beneath the southern produced water sump (Spill/Release Point ID 445591). The soil sampling activities, laboratory analytical results, and excavation outcome are summarized below.

On April 14, 2016, following removal of the northern produced water sump, one soil sample (N-B01@5') was collected from beneath the sump. The soil sample was submitted for laboratory analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) and total petroleum hydrocarbons (TPH)-gasoline range organics (GRO) by United States Environmental Protection Agency (USEPA) Method 8260C, TPH-diesel range organics and oil range organics (DRO and ORO) by USEPA Method 8015C, pH by USEPA Method 9045D, and specific conductance (EC) by USEPA Method 9050A. Laboratory analytical results indicated that the pH level in base soil sample N-B01@5', which was collected beneath the root zone, exceeded COGCC Table 910-1 allowable level for pH at 9.05.

On April 19, 2016, following removal of impacted soil from beneath the southern produced water sump, four representative sidewall soil samples (N01@7', E01@7', S01@7', W01@7') and one base soil sample (S-B01@14') were collected from the excavation and submitted for laboratory analysis of BTEX, TPH, pH, and EC. Laboratory analytical results indicated that the benzene concentration in soil sample S-B01@14' exceeded the COGCC Table 910-1 allowable level at 0.24 milligrams per kilogram (mg/kg).

On April 20, 2016, following removal of additional impacted soil from the southern produced water sump excavation, four sidewall soil samples (N02@16', E02@16', S02@16', and W02@16') and one soil base soil sample (B02@20') were collected from the excavation. Laboratory analytical results indicated that the TPH concentration in sidewall soil sample S02@16' and the benzene, total xylenes, TPH, and pH levels in base soil sample B02@20' exceeded COGCC Table 910-1 allowable levels. On April 21, 2016, following removal of additional impacted soil from the southern sidewall, one sidewall soil sample (S03@16') was collected from the excavation. Laboratory analytical results indicated that BTEX, TPH, pH, and EC levels were compliant with COGCC Table 910-1 allowable levels.

On May 5, 2016, a subsurface assessment was conducted to delineate the lateral extent of the remaining soil impacts. Using a direct-push drill rig, four soil borings (SB01 through SB04) were advanced around the perimeter of the excavation. One step-out soil boring (SB05) was completed to the north of SB02. The soil borings were advanced to refusal, which occurred at an approximate depth of 28 feet below ground surface (bgs). Two soil samples were collected from each soil boring. One sample was collected at total depth (28' bgs) and one at the depth of the highest photoionization detector (PID) headspace reading. The soil samples were submitted for laboratory analysis of BTEX, TPH, pH, and EC. The TPH concentration in soil sample SB02@20' exceeded the COGCC Table 910-1 allowable level. Concentrations/levels in all the remaining soil samples were compliant with COGCC allowable levels. Soil borings SB01 through SB05 were completed as temporary monitoring wells TMW01 through TMW05 to assess for the presence of groundwater. Groundwater was not encountered in any of the temporary monitoring wells within five days of completion. The temporary monitoring wells were abandoned on May 10, 2016. Soil boring logs with PID headspace readings and temporary monitoring well completion logs are included as an attachment.

In order to remove additional impacted soil from the excavation base, the excavation sidewalls were sloped (2:1 ratio) for stability in accordance with Occupational Safety and Health Administration Excavation Standard 29 Code of Federal Regulations (CFR) Part 1926 Sub-part P Section 1926.652(c)(4). Between June 7 and 9, 2016, following the removal of additional impacted soil, two sidewall soil samples (N03@22' and S04@22'), one base soil sample (B03@25'), and seven test pit soil samples (TP04@28', TP05@30', TP06@35', TP07@30', TP08@35', TP09@30', and TP10@35') were collected from the sloped excavation. Laboratory analytical results indicated that TPH, BTEX, pH, and EC levels were in compliance with COGCC Table 910-1 allowable levels at the lateral extent of the excavation. TPH, benzene, toluene, and/or pH levels continued to exceed COGCC allowable levels in soil sample B03@25' and the test pit soil samples collected from the base of the excavation. The general site layout, release location, excavation extent, sloped excavation access, and soil sample locations are depicted on the Excavation Site Map provided as Figure 1. The soil sample analytical results are summarized in Table 1 and the laboratory analytical reports are attached.

The sump excavation measured approximately 50 feet north to south by 30 feet east to west to a depth of approximately 25 feet bgs. Approximately 780 cubic yards of soil were excavated and transported to the Buffalo Ridge Landfill in Keenesburg, Colorado, for disposal. The produced

water sumps at this facility have been decommissioned, and the excavation area was backfilled and contoured to match pre-existing site conditions.

Further subsurface assessment activities will be conducted at the site to determine the vertical extent of impacted soil left in-place, and to determine if shallow groundwater has been impacted. If groundwater is encountered, groundwater monitoring wells will be installed to facilitate the groundwater assessment. If groundwater is present and found to be impacted, groundwater point of compliance will be established and groundwater monitoring will be conducted on a quarterly basis.

Please contact LTE at (303) 433-9788 if you have any questions regarding this Sump Closure Report or if you require additional information.

Sincerely,

### Notes and Definitions

U Sample is Non-Detect.

QR-03 The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.

QR-02 The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.

ND Analyte NOT DETECTED at or above the reporting limit
