**COMMENTS:**

On 11/20/2008, a GPS survey was conducted on the above well. The GPS coordinates are: Latitude: 39.914226825 degrees North Longitude: 108.702434483 degrees West  
It is proposed to move in a workover rig and perform an MIT (mechanical integrity test) on the above well. Should the test fail, then the well will be Plugged and Abandoned as proposed below.  
1) Repair access road and move in and rig up workover rig.  
2) Nipple down wellhead and nipple up BOP's.  
3) Pull 2-3/8" tubing and pick up a cast iron bridge plug (CIBP).  
4) Run in hole with CIBP and set at 2950' KBM.  
5) Perform MIT test by pressuring up well casing above CIBP to 300 psig or other required pressure for 15 Min.  
6) If test holds, trip out with tubing and pick up 4-3/4" bit. Run in hole and drill out CIBP. Trip out and secure well. Swab in and shut in.  
7) If test fails, set 15 sack cement plug on top of CIBP.  
8) Trip out and pick up a retrievable packer. Run in hole and locate leak. Trip out and lay down packer.  
9) Trip in hole and set 20 sack cement plug from 50' below hole. Cement should cover about 270'.  
10) Finish plugging well as required and cut off wellhead. Place cement plugs both 50' inside production casing and in surface casing-production casing annulus.  
11) Weld on surface cap on well and rig down. Move out.
