#### COMMENTS:

Cuttings associated with the Ray Ranch 0780 3-16H and 4-16H wells were sampled and analyzed for the Table 910-1 analytes except boron pursuant to SandRidge's E&P Waste Management Plan which was approved by the COGCC on June 22, 2016.

Based on the analytical results, all analyte concentrations meet those established in Table 910-1 except for pH. With respect to pH, the results reflected a value of 9.90 SU which is outside the Table 910-1 pH range of 6-9 SU. Subsequent pH analysis of the cuttings that have since been blended with a drying agent (i.e. Hydro Loc) have not been collected at this time.

SandRidge is attempting to identify the cause of these elevated pH values and, once identified, will make the necessary adjustments to ensure that all future cuttings destined for beneficial reuse meet the aforementioned Table 910-1 pH range.

In the interim, SandRidge is requesting permission to remove the cuttings from the bins in which they're presently stored and temporarily store them within a bermed area on the Ray Ranch pad for 7 to 10 days. Thereafter, samples of the cuttings will be collected and analyzed for pH. If the results reflect a pH within the Table 910-1 pH range, the cuttings will be beneficially used pursuant to the approved E&P Waste Management Plan. If the results continue to reflect a pH outside the aforementioned range, SandRidge will request a deviation from Q&A No. 32 of the COGCC's 2008 FAQ Document that would allow the cuttings to be beneficially reused in accordance with the approved E&P Waste via a separate Sundry Form 4.
