Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

We had a spill that occurred yesterday 8/30/16 on the Stacie 41-2 well site (API# 05-071-07893). A lease operator was dispatched to site to investigate a leaky well head. When arrived the operator found the packing on the well head to be leaking. The leak was repaired during this time. It is estimated that 3bbls of produced water were spilled. All of the water remained on the location with No state waters involved. The land owner has been notified.
