COMMENTS:

Synergy Resources would like to request to have OBM for all wells on Williams Pad. Reason for this change: OBM helps with lubricity thereby decreasing torque and drag enabling better weight transfer to the bit particularly in longer laterals or extended stepouts on larger pads. In addition, OBM inhibits highly reactive shales from swelling which leads to better wellbore stability and decreases the chances of sloughing formations, packing off or stuck pipe. Please note the Waste Management Plan has been attached to this sundry for the location as well.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____
