Denver, Colorado 80203

**RE: Tier 1 Assessment & Post-construction Recommendations
Former Merit Energy Company Properties
PDC Energy, Inc.
DJ Basin, Colorado**

Dear Mr. Ferguson:

At the request of PDC Energy, Inc. (PDC), LT Environmental, Inc. (LTE) conducted Tier 1 stormwater evaluations at each of the former Merit Energy Company (Merit) tank battery and well locations. LTE performed Tier 1 evaluations at 432 tank battery facilities and 748 well locations in the Denver-Julesburg (DJ) Basin on behalf of PDC. Field activities were undertaken from October 2012 to December 2012. The locations that were divested prior to August 1, 2014 were removed from this report. Details and results from the assessment are presented below.

Regulatory Background

Once the active construction phase of stormwater inspections is completed and the ground disturbance has been stabilized, stormwater compliance moves under the regulatory control of the Colorado Oil and Gas Conservation Commission (COGCC). The COGCC requires that a post-construction stormwater program be instituted as part of the site stabilization process during interim reclamation (while producing), per COGCC Rule 1002.f. The PDC Post-Construction Stormwater Program is a field-wide program, which should now include the acquired Merit properties.

Upon termination of the Colorado Department of Public Health and Environment (CDPHE) permit coverage, a site is evaluated to determine if further inspection is required under the COGCC post-construction stormwater program. This evaluation determines if the site can be permanently removed from future inspections or moved to a reduced inspection schedule. Sites that are classified as “Tier 1 Oil and Gas Locations” no longer need to be inspected, but sites that fail to qualify need to be inspected on a specified frequency, which is typically annually to quarterly depending on erosion potential assessments. One exception to this rule is if the site is within an agricultural field. In this instance, the site is exempted, returned to previous grade, and immediately removed from future inspections.

To qualify as a Tier 1 Oil and Gas Location, a site must meet all of the following criteria:

- Slope less than five percent (%);
- Vegetative cover or permanent erosion-resistant cover greater than 75%;
- Distance from a perennial stream or CDPHE Classified Water Supply Segment greater than 500 feet;
- Size less than one acre measured by the amount of surface disturbance at the time of the termination of the construction stormwater permit issued by the CDPHE; and
- Soils with low erosion potential (e.g., a high percentage of clay content).

Scope of Work

While the PDC sites would normally be evaluated for Tier 1 qualification one at a time, the acquisition of the former Merit properties prompted a large scale Tier 1 assessment to determine which well and tank battery locations fail the Tier 1 qualifications and should be moved into the PDC Post-construction Stormwater Program. The remaining sites that qualify as Tier 1 locations should not be incorporated into the PDC Post-construction Stormwater Program and does not require additional inspections.

After discussions with PDC, it was determined that LTE would conduct the Tier 1 assessment of all former Merit properties in one effort. LTE divided the acquired assets into smaller routes so the locations could be navigated and evaluated efficiently. The locations were evaluated against the Tier 1 evaluation criteria discussed above and the information was catalogued using a laptop equipped with an electronic database. This process allows for more efficient data recording and eliminates data transcription errors caused by copying notes to an electronic format at a later date.

LTE exported all the data collected during the Tier 1 assessment and created summary tables of the locations that were evaluated, which included the data collected from each site and the ultimate classification as Tier 1 or non-Tier 1 facilities. The tables are attached to this report (Tables 1 through 4).

LTE has revised the PDC Post-construction Stormwater Management Plan (SWMP) to include the operation areas acquired in the purchase of the former Merit properties. The revised Post-Construction SWMP was submitted under separate cover.

Tier 1 Evaluation Results

LTE conducted the Tier 1 assessment using COGCC Rule 1000 Reclamation Regulations. As part of this program, LTE performed Tier 1 evaluations at 432 tank battery facilities and 748 well locations in the DJ Basin. Field activities were initiated on October 31, 2012, and continued

until December 18, 2012. Data was compiled, tabulated, and analyzed. Of the 432 tank battery facilities inspected, 4 locations were divested, and only 78 facilities should move forward into the PDC Post-construction Stormwater Program following the Tier 1 assessment. Tables 1 and 3 summarize the tank battery inspections. Table 1 summarizes the tank batteries that were not classified as Tier 1 locations (78) and should be inspected annually moving forward. Table 3 summarizes the tank batteries that were classified as Tier 1 locations and should be excluded from future stormwater inspections.

Of the 748 well locations inspected, 13 locations were divested, and only 123 should move forward into the PDC Post-construction Stormwater Program. Tables 2 and 4 summarize the well location inspections. Table 2 summarizes the well locations that were not classified as Tier 1 locations (123) and should be inspected annually moving forward. Table 4 summarizes the well locations that were classified as Tier 1 locations and should be excluded from future stormwater inspections. The Tier 1 assessment reduced the number of former Merit properties that will require future post-construction stormwater inspections by 82.7%.

As discussed in the regulatory background and scope of work sections, each location was evaluated against the five qualifications required by the COGCC (slope, vegetative cover, distance to surface water, area of disturbance, and erosion potential,). When in question, slope was measured using a clinometer and the slope was viewed at the steepest incline at each tank battery and well location. Tank battery and well locations where the slope was 5% or greater failed the Tier 1 requirement. The vegetation coverage criteria were failed when the ground cover was not covered by at least 75% vegetation density and/or permanent erosion resistant coverage. Sites were also failed when the distance from a perennial stream or Classified Water Supply Segment was less than 500 feet. Per direction from the COGCC 100 series definitions, Classified Water Supply segments consisted of the South Platte River, Cache la Poudre River, Big Thompson River, Little Thompson River and perennial streams flowing into these segments. Additional analysis defining the distances to perennial streams or Classified Water Supply Segments was conducted on August 18, 2014. Sites exceeding one acre of surface disturbance were failed. The determination of erosive soils was made when moderate rill erosion was evident at the location. The following table summarizes Tier 1 qualification failures. Some locations are counted multiple times in the table as there are multiple qualification failures.

Facility	5% or Greater Slope	75% Vegetation Coverage/ Permanent Erosion Resistance Covering	Within 500 feet of Perennial Stream or Classified Water Supply Segment	Greater than One Acre Disturbance at CDPHE Closure	Erosive Soils	Total Criteria Failures
Tank Battery Failures	56	2	21	1	18	78
Well Failures	87	3	38	11	50	123

There are 762 tank battery and well locations that exist within agricultural fields. These locations were automatically classified as Tier 1 locations and will not need to be inspected as part of the ongoing PDC Post-construction Stormwater Program.

Post-Construction Program and Ongoing Inspections

LTE recommends that PDC continue the periodic post-construction stormwater inspections in accordance with COGCC guidelines at the locations that failed to qualify as a Tier 1 oil and gas locations (78 tank batteries and 123 wells).

Of the five factors determining the Tier 1 classification, only proximity to Classified Water Supply Segments cannot be improved. Slopes can sometimes be reduced with grading efforts, best management practices (BMPs) can be implemented to reduce erosion potential, vegetation and other stabilization efforts can be conducted, and the disturbance area can be reduced. Re-assessment of the Tier 1 classification should be part of each post-construction stormwater inspection. Through these efforts, PDC will continue toward bringing additional sites into the Tier 1 classification. LTE noted that five locations failed the Tier 1 classification based upon the 75% vegetation coverage criteria. LTE recommends that with little effort toward seeding resulting in vegetation growth, these locations could possibly be removed from the post-construction inspection schedule.

The post-construction stormwater inspections should continue until 80% re-vegetation density is achieved following final reclamation of a tank battery location or plugging and abandonment of a well location.

Sincerely,

LT ENVIRONMENTAL, INC.
