**General Comment:**

Environmental Inspection conducted on Sept 16, 2016 in response to a spill reported by URSA (Spill doc #401109365, Spill point ID #447775). An unidentified person opened a valve on a produced water tank. The fluid was mostly contained in the secondary containment but some fluid left the containment. Impacted material had been excavated and URSA's environmental consultant sampled the bottom of the excavation. See photos.

Tumbleweed in wellheads area. Other than that, no weed, junk or staining was observed on site.
