

On September 2, 2016 COGCC Environmental Staff (Alex Fischer) conducted an environmental field inspection of ARCH OIL AND GAS (Arch) J.P. Weise # 2 Location ID: 312774. The INSP included Tank Battery, the well (API 05-081-05291), tank battery, and land treatment area. Weather was sunny to partially cloudy and temperature app mid 60s degree F and wind from the south. The well was producing at time of inspection. *For the most recent Field and Environmental Field inspection report of this facility, please refer to document # 673403545. At the time of the inspection, corrective actions (CAs) provided in that inspection had not been addressed. The overall inspection status shall remain the same as that document until all CAs have been completed.* The following is a summary:

Well head:

Oil staining at wellhead with what appears to be a leak at the stuffing box.

Land Treatment Area:

An app 80' X 60' X 2' in height land treatment area exists. The land treatment area is fenced with 3-strand barbed wire and "T" posts. The land treatment area is bermed with material placed on a liner. The liner has been compromised with apparent hoof tracks from livestock or wildlife. Some oily soil was observed and the treatment are appears to have been worked over recently. Some of the waddles are in disrepair.

Tank Battery:

One (1) 400 bbl tank is present. A weld appears to be leaking on the bottom bull plug on the eastern side of the tank.

Tank battery is bermed with Vegetation (weeds) throughout.

Corrective Actions (CAs):

Address the CAs outlined in the previous Inspection Report, Document 673403545.

By October 28, 2016, provide a status update (Supplemental Form 27 to Kris Neidel) of the Land Treatment operations including: analytical results of the June 20, 2016 sampling event and all sampling events thereafter, frequency of tilling, disking, addition of nutrients, etc.

By October 28, 2016, remediate the oily stains beneath valves, fittings, and stuffing box at well head.

By October 28, 2016, address the leaking weld at the bottom bull plug on the eastern side of the tank.

906.a, Spills/Releases, Control and contain spills/releases and clean up per Rule 906.a. Contact COGCC EPS staff., Immediately to stop and clean up 24 hours to remove free fluids. 30-days to remove stained soil.
