General Comment:

This is a follow up inspection to Inspection Report Doc. #682500705 and to Formal Complaint Doc. 200440367. Inspector contacted surface owner (Marty Schmidt) at approximately 10:59 am on 9/27/2016. Mr. Schmidt conveyed concerns regarding weeds that have become established and erosion degradation occurring on the location. Any corrective actions from previous inspections that have not been addressed are still applicable.

VEGETATIVE COVER _____

Comment: **Gravel remains on location and access road and will need to be removed. Location and access road requires compaction alleviation to a depth of 18 inches per reclamation regulations and seeding. It appears First favorable revegetation season may have been Spring of 2016. Second favorable revegetation November 2016. Removal and disposal of gravel is highly advantageous as it will remove any mature puncturevine seed on location. See "COGCC Comments" for additional CAs and CA dates.**

Corrective Action:	Remove gravel and continue reclamation activities per reclamation requirements. Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. Revegetation activities shall be complete no later than 11/15/2016	Date <u>11/15/2016</u>
Overall Final Reclamation <input type="checkbox"/> In Process <input type="checkbox"/> Well Release on Active Location <input type="checkbox"/> Multi-Well Location <input type="checkbox"/>		
Storm Water:		
Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs
Comment: Surface owner had conveyed concerns regarding erosion occurring on location. Inspection Doc. #682500705 documented erosion on the west end of the location and stated that operator needs to monitor and maintain site specific erosion controls. Erosion on location has progressed; it does not appear as though BMPs had been implemented to mitigate further degradation due to erosion on this location. See figures 5-7 in the attached photo document.		
Corrective Action: Repair and stabilize erosion during reclamation activities. Properly select, install and maintain site specific stormwater and sediment control BMPs to prevent further degradation to the location. BMPs will need to be monitored and maintained until final reclamation has passed.		
		Date: <u>11/15/2016</u>
Pits: <input type="checkbox"/> NO SURFACE INDICATION OF PIT		

COGCC Comments

Comment	User	Date
COMMENT: Surface owner had conveyed concerns regarding undesirable weedy vegetation that have become established on the location. Surface owner also expressed concerns of weeds potentially encroaching off of the location and onto his lands. Upon inspection, inspector documented that Tribulus terrestris (Puncturevine) has become established within large areas of the location. Tribulus terrestris was only documented within the location; inspector was unable to locate the weed within reference area. This species is a Colorado State noxious weed with seed that remains viable for up to 5 years, and can compete with desirable native vegetation and hinder reclamation.	trujilloam	09/30/2016
CORRECTIVE ACTION: Manage undesirable weedy vegetation, including noxious weeds from the location prior to any additional surface disturbing activities for reclamation, or by 10/30/2016, whichever comes first. Monitor and manage weeds on this site until Final Reclamation has passed.		
Contacted Mr. Terry Pape via email (9/28/2016) regarding the "reclamation status of this location, i.e. what work has been done, when work was completed, what work is still required and the time frame in which this work is scheduled". Mr. Pape responded with "The work is scheduled for this fall. We were going to try to complete the work last spring. But the weather prevented it. We will be ripping and seeding with in the next few weeks". Inspector is using this conversation to facilitate determination of CA dates.	trujilloam	09/29/2016
Inspection Doc. #682500705 required operator to "Collaborate with the landowner to determine mitigating measures regarding surface disturbances outside of access road/location boundary during reclamation. Provide the surface owner/operator agreement and schedule regarding the off location disturbances attached to a Form 4 by CA date of 5/15/2016". Inspector has yet to receive schedule via Form 4. This CA and CA date is still applicable.	trujilloam	09/29/2016
