**Complaint**

Comment: Complaint DOC#200440407. Area resident complained about C-scale noise coming from the Anderson Location. OGCC staff was on location on 10/6/16 to investigate. OGCC staff determined the sound source to be the compressors on the emissions reduction equipment that was running on the site. Ward energy was contacted and provided OGCC staff with background sound data (attached). The background C-Scale noise from the report was 69db. OGCC ran a sound survey about 250 yards to the north of location at GPS 39.95781, -104.82348. OGCC staff was not able to run a survey at the receptor because Sable avenue is between the location and receptor and would skew the survey. The OGCC sound survey resulted in a LeqC of 70.8db, but when traffic on 138th is factored out, the average is around 68-69db in line with the background survey preformed by Ward. 18A DOC#200440412
