Kris,

Good morning,

The three Duncan Ranch background samples were received by ACZ Labs and are being analyzed for the COGCC Table 910-1 parameters. I expect to have the results by the end of this month. I'll prepare a summary table and submit all of the analyses to you once I have all of the results.

The site has been shut-down and secured for the winter. The cuttings containment berms are intact and all of the storm water management features were inspected last week and are intact.

Please let me know if you have any questions or concerns about the table that I sent you last week.

Take care,

Rick
