Comment: The access road to the location remains with gravel and culverts in place. The vegetation from interim reclamation is well established and is at least 80% of reference area levels. There are electric utilities that remain along the access road and at the location. There was an area with gravel at the west side of the location. There was noxious weeds at the north and east side of the location. See Attached Photos

Pits: ☒ NO SURFACE INDICATION OF PIT

COGCC Comments		
Comment	User	Date
The noxious weeds found along the north and east sides of the location had produced seed and have died off for the season. There was not many weeds noticed however more may establish in the following growing season. Any remaining seed heads should be collected and removed and follow up weed control should be performed in the spring growing season.	CostaR	11/08/2016
The operator indicated that a variance request of certain final reclamation requirements is in process to be submitted.	CostaR	11/08/2016
