COMMENTS:

Encana is providing a status update of the insitu remediation cell as described in document number 2210624, as part of REM #9307. Encana collected 23 soil borings from the remediation cell area to determine status and future activities needed in the area. The soil borings identified one sample to be above COGCC Table 910-1 standards (Total Petroleum Hydrocarbon), SBN 13-15 feet, with a TPH concentration of 1199.06 mg/Kg. During remediation cell construction, bedrock was encountered at 16 feet, stopping potential migration of impacted material. Encana will continue to complete insitu remediation of the cell and provide additional status updates to the COGCC when available.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____
