Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

DCP Environmental was informed by DCP Pipeline group of a pipeline release on November 21st, 2016 around 3:00 pm. At the time of discovery the pipeline was isolated and blowdown, preventing the release from continuing. DCP Pipeline group visited the potential release site to perform the initial investigation. At that time they determined that the pipeline had ruptured and a release of greater than 1 but less than 5 barrels of condensate had occurred. The DCP Environmental group visited the site on November 22nd' 2016 to investigate the release. During the investigation the size of the release was confirmed. DCP Environmental contacted a third party remediation contractor to inform them of the release location and to have them preform an initial site visit and investigation of the release location.
