#### Land Use:

Current Land Use: NON-CROP LAND Other(Specify): \_\_\_\_\_

Weather Condition: Cloudy 70

Surface Owner: FEE Other(Specify): \_\_\_\_\_

#### Check if impacted or threatened by spill/Release (please answer Yes/No to all that apply):

Waters of the State  Residence/Occupied Structure  Livestock  Public Byway  Surface Water Supply Area

*As defined in COGCC 100-Series Rules*

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

While conducting annual integrity testing on a partially buried vault, we observed that the vault was not able to hold freshwater we were using to conduct the test. The tank was removed and impacted soil was observed beneath it.

### OPERATOR COMMENTS:

Per the COAs attached to a Form 4 (COGCC Document ID 401115283) submitted on September 20, 2016, Caerus was required to backfill the excavation associated with the PBV removal project and submit a Form 19 confirming that the work had been done.

The excavation was backfilled and the tank battery associated with the Unocal 1 pad location was reinstalled.

The soil removed during the remediation activities was landfarmed on site. On September 26, 2016, a soil sample (Unocal 1 Landfarm) was collected from the landfarm. The sample was submitted for laboratory analysis of all COGCC Table 910-1 analytes. Analytical results indicate the soil sample was in compliance with COGCC Table 910-1 Concentration Levels for all analytes or were within background concentrations, except for the electrical conductivity (EC) and sodium adsorption ratio (SAR) measurements. However, the soil that this sample was collected from will be buried in the excavation mentioned above at a depth greater than three feet below the ground surface and the COGCC does not apply the Concentration Level for EC or SAR to soils deeper than three feet below the ground surface. Background samples were collected from an undisturbed area near the Chevron 41-8D pad (COGCC Location ID 324198). Laboratory analytical results are summarized in the attached analytical table and laboratory analytical reports are included as an attachment.

Based on removal of the PBV, backfilling of the excavation, and soil analytical results, Caerus requests an NFA designation for this project.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
