Cc: "Green, Doreen" <Doreen.Green@anadarko.com>

In reference to inspection document #684902650 for the GEE WILLIAM E GU 2. (API 0512310066),

We request that the NOI, submitted 11/26/16, is approved and we move forward to plug the well in April of 2017 as we currently have planned on the rig schedule.

Well was safety prepped with remedial cement 04/2015, and the form 5 was submitted for the remedial work. Reference the Daily Operations report submitted with the form 5 for any pressure tests performed while doing the remedial cement work. A packer was set at 6797'.

A Bradenhead test was performed 04/19/2016.

We have had the well in a shut-in status since completing the remedial cement work in April of 2015, and anticipated that a MIT would be due in April of 2017.

The wellhead equipment was removed from location and no 5A was submitted to TA (incapable of production) the well.

Any questions or concerns, please let me know.

Thank You

Luke Reddy
