Hi Peter – here's the email we sent to Chris Canfield that included the 3rd Quarter 2016 GW Report.

As indicated in that report, we had two clean consecutive quarters, however, our most recent sampling event for the 4TH Quarter 2016 indicated that we've had a bit of rebound in MW-1 and MW-5, which had benzene concentrations of 7.4 and 40 ug/L, respectively. We have had the AS/SVE unit off since approximately May 2016.

The 4th Quarter report will be issued in the next week or two. I will email it to you directly at that time.

Thanks!

Best regards,

Paul V. Henehan, PE

Subject: Homestead Oil - Stephens #1 Ground Water Data Submittal

Dear Mr. Canfield – at the request of our client, Homestead Oil, Fremont Environmental submits the attached Ground Water Data Submittal for Homestead's Stephens #1 location. Ground water impacts are now less than the COGCC's Table 910-1 limits, therefore, after four consecutive COGCC-compliant quarters, Homestead will request that a No Further Action (NFA) determination be provided by COGCC. Thanks.

Best regards,

12/9/2016
