Fluid(s) Spilled/Released (please answer Yes/No):

Was one (1) barrel or more spilled outside of berms or secondary containment? Yes

Secondary containment, including walls & floor regardless of construction material, must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.

Were Five (5) barrels or more spilled? Yes

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A small leak was discovered in the bottom of the low-pressure separator vessel at approximately 8:00 a.m. this morning (12/13/16). The calculated volume of the spill is approximately 8.6 bbls condensate. Production personnel were on location yesterday afternoon (12/12/16), and there was no evidence of a leak at that time. The low-pressure separator was removed from service this afternoon, and impacted soils are being excavated and will be land-farmed on-site (with BLM's approval). Once all impacted soils have been excavated, a confirmation sample(s) will be collected to verify that COGCC 910-1 clean-up standards have been met. There are no off-site, or other environmental impacts associated with this incident.

Environmental	Assess nature and extent of contamination with confirmation soil samples. Remediate to Table 910-1 standards and provide documentation in a Supplemental F-19. Documentation must include a figure showing spill area with sample locations plus laboratory results. Obtain permission from surface owner (BLM) prior to landfarming. Submit an F-27 for remediation by landfarming including design and construction, operation and maintenance plus sampling and analysis along with final closure plan.	12/14/2016
