1	Drilling/Completion Operations	TEP will run triple-combo open hole logs from well TD up to base of surface casing on one of the first wells drilled on a multi-well pad. Remaining wells on the pad will be logged with either cased hole pulsed neutron or triple-combo open hole. Every well will also have a CBL log from well TD up through well surface. Form 5 Completion Reports will identify wells on the pad with triple-combo open hole logs.

Permit	Corrected the distance to nearest well in the same formation from 852' to 660' with operator approval. Spacing order doesn't create a unit, therefore I removed the distance to unit boundary of 170' as well as the unit acreage and unit description. Operator agrees with changes. Final review complete.	01/04/2017
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available geophysical logs and hydrogeologic information to evaluate the adequacy of the operator's proposed surface casing setting depth. The deepest water well within one mile is 130 feet. Offset Well Evaluation: Existing offset oil and gas wells within 1,500 feet of this wellbore meet standards. No mitigation required.	11/04/2016
Permit	Corrected distance to lease line from 1712' to "0" with operator approval. SHL is in different federal lease than BHL. Form passes completeness.	11/02/2016
