Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During an annual flowline test, the line failed to hold pressure. Well immediately SI. Excavation was delayed until corn was out of field. On 11/7/2016 excavation uncovered both the flowline to the Mapelli#5 and an older parallel pre-existing 2" steel line. The pre-existing line was full of holes. The contaminated soil was excavated and hauled to commercial disposal. Samples were taken from sides and bottom of pit after excavation and sent to lab and fill dirt was added to replace contaminated soil. The original topsoil was used to top off the excavation site. Site returned to previous condition.
