Complaint

Comment: This inspection is in response to Complaint #200440901 regarding reclamation efforts conducted by the Operator after a release on April 20, 2014, and concerns expressed by the complainant about the revegetation of the area. COGCC staff is requesting the Operator provide information while Complaint #200440901 is still under review. A follow up inspection will proceed after the Operator provides the requested information and further review is conducted.

Initial review found that approximately 460 cubic yards of soil was scraped to remove any residual surface contamination and approximately 10.0 acres seeded twice- Fall 2014 and Summer/Fall 2015- using the preferred landowner seed mix and crimped with straw. Based on a LT Environmental report submitted on May 22, 2014 titled "Documentation of Field Observations and Sample Results", a liquid bio-formulation (MicroBlaze) was applied to portions of the impacted area.

Corrective Action: Please provide the following information:

Date: 01/25/2017

- 1) Seed mix and seeding rate used during both applications in 2014 and 2015.
- 2) Specifics on the MicroBlaze microbes, nutrients and surfactants applied, and confirm the application rate used on the impacted area.
- 3) Application rate and mulch product used.
- 4) Provide any additional information if amendments were applied (i.e., nitrogen).
