Hi Allison,

COGCC has reviewed the revised Form 27 Site Investigation and Remediation Workplan for the Toedtli 1-10 Pit. The Form 27 is approved with the following condition:

Operator shall comply with the Waste Management Plan on approved Sundry Notice Document #401176256. Material with elevated pH, SAR, or EC should be buried under a minimum of three (3) feet of backfill cover and soil that satisfies either the Table 910-1 levels for pH, SAR, and EC or the background levels for such contaminants within three (3) feet of the ground surface at the site. In addition, the soil horizons must be replaced in their original relative position and the location must be reclaimed in accordance with 1000 Series Rules, including the establishment of vegetative cover on non-cropland and successful crop growth on cropland.

When the material has been removed, please submit analytical results documenting compliance with Table 910-1 for Inorganics in Soils (electrical conductivity, sodium adsorption ratio, pH). Submit all future reports regarding this project using eForm 27 and continue to reference Remediation Project #9951.

Contact me with any questions regarding this project.

Regards,

Richard Allison, P.G.

Good Afternoon Rick-

Please find attached a supplemental Form 27 for the Synergy Toedtli 1-10 pit (Remediation Project #9951). This outlines the plan to excavate and haul material with elevated levels of pH, EC, and SAR from the Toedtli 1-10 to the Toedtli 22-2. A Waste Management Plan will be submitted via a Sundry Notice, Form 4, prior to commencing work.

If you have any questions, please let us know.

Thank you,

Allison White, P.E.
