Allison,

COGCC has reviewed and approved the revised Form 27 Site Investigation and Remediation Workplan for the Toedtli 22-2 pit. The Form 27 is approved with the following condition:

Operator shall comply with the Waste Management Plan on approved Sundry Notice Document #401176256. Material with elevated pH, SAR, or EC should be buried under a minimum of three (3) feet of backfill cover and soil that satisfies either the Table 910-1 levels for pH, SAR, and EC or the background levels for such contaminants within three (3) feet of the ground surface at the site. In addition, the soil horizons must be replaced in their original relative position and the location must be reclaimed in accordance with 1000 Series Rules, including the establishment of vegetative cover on non-cropland and successful crop growth on cropland.

Once operations at the Toedtli 1-10 and Toedtli 22-2 pits are complete, submit analytical results showing compliance with Table 910-1 Inorganics in Soil (electrical conductivity, Sodium Adsorption Ratio, pH). Submit all future reports using eForm 27 and reference Remediation Project #9950.

A copy of the approved Form 27 is attach for your records. Please contact me with any questions.

Regards,

Richard Allison, P.G.

Good Afternoon Rick-

Please find attached a supplemental Form 27 for the Synergy Toedtli 22-2 pits. This outlines the plan to excavate and haul material with elevated levels of pH, EC, and SAR from the Toedtli 1-10 to the Toedtli 22-2. A Waste Management Plan will be submitted via a Sundry Notice, Form 4, prior to commencing work.

If you have any questions, please let us know.

Thank you,

Allison White, P.E.
