Well Release on Active Location ☐Multi-Well Location ☐**COGCC Comments**

Comment	User	Date
Note to Operator: An annual grass species (possibly triticum) appears to have been included in the most recent seeding attempt. It appears this grass was seeded at a fairly high rate (refer to figures 4 and 5 in the attached document) on the west end of the location. The now dead vegetation has become thatchy and decadent to a point where it may be "smothering" the germination of desirable perennial vegetation that may have been included in the mix. Reclamation specialist advises against the use of annual species that 1) compete with any desirable species in your mix, and 2) does not contribute to the overall perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels.	trujilloam	01/18/2017
