RECLAMATION

INTERIM RECLAMATION

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

Add one (1) separator to the location. Therefore, the new total is two (2) separators.

One buried gas pipeline is utilized to gather gas production from location. The main pipeline is constructed of 3 inch nominal diameter SDR 13.5 HDPC 4710 pipe engineered to handle design pressures. The pipeline originates on location and terminates at a larger mainline off of the pad. One flowline is installed from the wellhead to the separator carrying multiphase flow. During production, the flow is from the wellhead to the production facility. This buried flowline is a 3 inch steel pipeline and approximately 125' in length.

Two (2) lines begin from the separator. The first line from the separator is a gas line routed to the pipeline described above and the second line is a liquid line connected to a treater. The treater then has three (3) lines originating from it: one line to the flare/combustor; one line to the oil production tanks; and one line to the water tank. The line to the flare/combustor is approximately 165 feet in length. The lines to the oil production and water tanks are approximately 185 feet in length.

The modification of this oil & gas location was within the originally disturbed area, and there was no additional surface disturbance. In addition, the modification did not change the cultural distances included on the original Form 2A.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the

public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
