Larry and Michael,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have the following comments.

1) In the Cultural Setback Distance section you have indicated the nearest Above Ground Utility to a well is 480 feet. A review of your Location Drawing shows the southern row of wells will be 405 feet from an existing overhead power line (Line L12 on the Line Table). Therefore, I would like to revise the distance to the nearest Above Ground Utility to reflect this.

2) In the Cultural Setback Distance section you have indicated the nearest Building Unit to a well is greater than a mile. During my review, I located a house that is approximately 4,100 feet northwest of the nearest well. See the attached aerial photo screenshot. Therefore, I would like to revise the distance to the nearest Building Unit to reflect this.

3) In the Water Resources section you have indicated the nearest downgradient surface water feature is 877 feet. Your Hydrology Map depicts an intermittent stream that corresponds to this surface water feature but does not include the bearing and distance to it. Please revise your Hydrology Map to include this information.

Please respond to this correspondence by March 16, 2017. If you have any questions please contact me. Thank you.

Please revise distance to 405 feet.

Please note that the Building you see in your photo is abandoned and has burned down.
