TRANSECT RESULTS OF DISTURBED AREA% _____

TRANSECT RESULTS OF REFERENCE AREA% _____

TOTAL % OF DESIRABLE VEGETATION COVER _____

VEGETATIVE COVER _____

Comment: All equipment, gravel, and debris have been removed. There are areas at the location where soils appear to be compacted. Soil decompaction must be performed by cross ripping to a minimum depth of 18 inches. Was unable to determine if seeding has been performed. Additional decompaction and seeding should be performed prior to the growing season. It is recommended that a certified weed free mulch be applied to stabilize the soils and facilitate vegetation establishment. See Attached Photos

COGCC Comments

Comment	User	Date
Establish vegetation with total perennial non-invasive plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Continue to monitor and manage this site until Final Reclamation has Passed.	CostaR	02/17/2017
