General Comment:

Environmental inspection related to Special Project #2150. Approximately 16 cubic yards of impacted soil were stockpiled on location by Benchmark Energy LLC during the initial cleanup effort related to flowline Spill ID #441501. The COGCC excavated an additional 7 cubic yards of impacted material and subsequently disposed of all the impacted soil as documented on Waste Tracking Number #305112, at the Waste Management North Weld Landfill in Ault, CO.

The damaged polyethylene flowline section was cut out and each open end was capped. On September 21, 2016, four soil samples were collected from the extents of the excavation for BTEX and TPH laboratory analysis. No BTEX or TPH constituents were detected above the Table 910-1 concentrations. On October 14, 2016, two loads of soil from the stockpile at the NW Graylin Pump Station #2 were used to backfill the open excavation. The capped ends of the flowline were marked using fence posts for future access. Following the backfilling, the excavation area was deep ripped to alleviate compaction and prepare the site for final reclamation activities.
