**General Comment:**

Site visit with Lorne Prescott (Laramie) and Craig Burger (COGCC) to assess Pond 4 modification to CE&P. Clear and sunny, 30F with ~ six inches snow cover. Also observed site of tank explosion at NW corner of DAF facility. A mostly empty 1000 bbl pw tank downstream of DAF and filter press had exploded. Tank was lifted off the surface and destroyed. Tank is laying horizontally on the ground at time of site visit. Accident report submitted to Shaun Kellerby. Cause remains under investigation but possibly caused by tank heater contact with VOC vapors. No indications of petroleum release on ground surface but area has recent snowfall. Adjacent tanks have shredded insulation cover but structural damage is uncertain by visible observation.

Proposed Pond 4 area is snow-covered, graded level surface. Construction planned beginning for May 1. Plans include deeper pit within original permitted footprint. No obvious limitations to this plan are observed.

Pond 3 water is clear with no petro sheen and minimal odor.

Pond 2 has active inflow discharge. Water is turbid brown with partial ice cover but no apparent petro sheen.
