COMMENTS:

As per Kerr McGee Oil & Gas Onshore LP's (Kerr-McGee) approved Waste Management Plan for Land Application of Water-Based Bentonitic Drilling Fluids & Associated Drill Cuttings, the drill cuttings from the Reynolds Cattle 6C-19HZ, Reynolds Cattle 6N-19HZ, Reynolds Cattle 32N-23HZ, and Reynolds Cattle 5C-23HZ wells were land applied to the surface of the Reynolds Cattle 6C-19HZ well pad. The drill cuttings from the wells were mixed with EcoSponge™ bioremediation product and incorporated into the native soil during well pad reclamation activities. After final incorporation, a four-point composite soil sample (Pad Comp) was collected from 0-8 inches below ground surface from the reclaimed well pad and submitted for laboratory analysis of total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX), pH, electrical conductivity (EC), sodium adsorption ratio (SAR), total arsenic, and total barium. Four discrete background soil samples (Off N, Off E, Off S, and Off W) were collected from the undisturbed native surface soil surrounding the well pad and submitted for laboratory analysis of total arsenic. The four background soil samples were also composited into one additional soil sample (Off Comp) and submitted for the analysis of pH, EC, SAR, total arsenic, and total barium. Laboratory analytical results confirm that all concentrations and levels in the Pad Comp composite soil sample were compliant with the Colorado Oil and Gas Conservation Commission (COGCC) Table 910-1 allowable levels and/or below the site background levels. Based on the laboratory results, Kerr-McGee is requesting a no further action (NFA) status for this well pad. The laboratory report is included as an attachment to this Form 4.
