Comment:

Location had been recently disturbed, likely due to disking per mid-contract management practices required by federal CRP. Based on on the ground observations, it is unlikely that location has achieved a desirable, uniform perennial vegetative cover of 80% to that of the reference pre-disturbance. However, inspector is unable to perform an accurate assessment of the reclamation of this location. Inspector will need to return in a future growing season once vegetation has recovered in order to perform a quantitative analysis to evaluate compliance with reclamation standards.
