Comment: Corrective actions to install sufficient BMPs appear to have been performed, even though BMPs do not appear to be installed in accordance with good engineering practices. An unconsolidated berm has been installed along the north and east production area. Cattle have diminished the quality of the berm along major portions. Wattles have been placed along two potential discharge points without properly installing wattles by trenching and backfilling. BMPs should remain in place and in proper functioning condition until the location reaches final reclamation.
