General Comment:

COGCC Environmental staff onsite during Noble Energy pumping test of Sand Creek Monitoring Well. Onsite qualitative observations indicate that no gas flow was recorded greater than 0.2 cfm during the first 90 minutes of pumping, followed by an increase to approximately 1 cfm after an additional 90 minutes of pumping when the water level was reduced to the pump intake at approximately 220 feet. Operator shut down the pump after an additional 90 minutes of 1 cfm gas flow and ~2 gpm water pumping. Will resume test on Friday 3/31/2017 weather dependent.
