Update on the Jack Berger GU C 2 J-Sand plug placement.

Thanks,  
Sam

I'm fine with that change.

Thanks,

Diane McCoy

Hi Diane,

We're currently on the **Jack Berger GU C 2 (API# 05-123-10039)** and we've been drilling all day in an attempt to reach 8000' to place our first CIBP to cover the J-Sand. Originally, we tagged fill at 7752' and we're now at around 7800'. The rig supervisor communicated that the returns are showing some form of plug or mechanical device that may have been left in the hole in the past. Are you okay with us placing the CIBP at around 7800'? The perf intervals are:

- J Sand: 8096 - 8126
- Codell: 7658 -7670

Thanks and hope you're well,  
Samantha
