Comment:

Inspection doc. 682500742 failed final reclamation due to insufficient vegetation cover. Transects had been conducted indicating desirable perennial vegetation is not 80% of the surrounding reference area. Inspection doc. 682500742 required operator to "Establish vegetation with total perennial non-invasive plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed". Inspector was unable to find any evidence to suggest that reclamation activities were conducted.

Corrective Action:

Original corrective action and corrective action date remains: Establish vegetation with total perennial non-invasive plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture that matches the adjacent pastureland or a seed mixture requested by the landowner. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. Revegetation activities shall be complete no later than 6/10/2016
