Hi Larissa,

Just checking in with you on Barbara's prior email. I've amended your Operator comment on the Submit tab, but am still waiting for your feedback on the following:

- We would like to add the following COA for completion: This well can only be tested and completed in the Niobrara formation. No other formations are being permitted with this Form 2, Application for Permit to Drill.
- We would like to change the BMP for open hole logging, and also add this same item as a COA: Open-hole Resistivity Log with Gamma Ray Log will be run from TD into the surface casing. A Cement Bond Log with Gamma-Ray will be run on production casing, or on intermediate casing if a production liner is run. The Form 5, Completion Report, will list all logs run and have those logs attached.
- The lease map attached to the form seems to show a collection of separate lease tracts (or surface parcels?) in Section 28, and you've given the total acreage as 471. During our last phone conversation you indicated you would verify with your land department if this is one single lease or a combined batch of smaller leases. Were you able to get that information from them? If they are individual leases, we will need a revised lease map/description and revised total acreage for the tract in the southwest corner of the section where the well will be developing minerals.

Please let me know if the BMP/COA changes are acceptable, and please verify the lease description so we can get this APD sent off for final approval.

Thank you,

Sabrina

Hi Sabrina,

The COA is fine. The lease map that was provided is one lease. Also please update the BMP to the one listed below.

Thank you,
