

Photo 1: View of the project area from the northeastern corner facing center.

Photo 2: View of the eastern portion of the project area from the northeastern corner facing southward. Revegetation is largely comprised of grasses such as smooth brome (*Bromus inermis*) and western wheatgrass (*Pascopyrum smithii*).

Photo 3: View of the southern portion of the project area from the southeastern corner facing westward.

Photo 4: View of musk thistles (*Carduus nutans*) within the southern portion of the interim reclamation area.

Photo 8: View of reference area assessed during inspection. Reference area is within an irrigated grass field. Dominant and common species include:

- Smooth brome (*Bromus inermis*)
- western wheatgrass (*Pascopyrum smithii*)
