General Comment:

COGCC Integrity Inspection performed on April 19th, 2017 in response to initial form 19 spill report Doc #401261051 received on 04/17/2017 that outlines: DCP Environmental was informed by DCP Pipeline group of a possible pipeline release on March 23rd, 2017 around 10:00 am. At the time of notification the DCP pipeline group had identified that a 2 inch flowline was not holding pressure, but there was no visible staining on the surface to indicate soil contamination. Due to landowner concerns of traffic on the access road to the location, which also happens to be the landowner's driveway, DCP Pipeline group was not able to excavate and investigate the pipeline release until April 17th, 2017. A DCP Environmental Group representative was onsite during the excavation of the flowline and determined that soil and ground water contamination had occurred and that the size of the release was estimated at greater than 1 barrel of natural gas liquids. Two soil samples were collected to establish a baseline for further remediation. The pipeline repair crew and excavation team repaired the flowline as needed on April 17th, 2017. The details of observations made during this field inspection are available in the flowline section of this report. Photo's uploaded can be accessed via link(s) at the end of this report.

<u>Comment:</u>	COGCC field inspector spoke with the environmental contractor working on location. The area where the repair was made had been backfilled due to an incoming storm. Excavation and remediation activities are scheduled to be completed in the near future, weather permitting. The line failure occurred approximately 50' SW and downstream of the DCP meter run. The repair to the flowline has been completed.	
<u>Corrective Action:</u>		<u>Date:</u>

COGCC Comments

Comment	User	Date
Note: Document and retain records of root cause of failure evaluation, measures taken to prevent the problem from reoccurring and description of all flowline repairs completed (*add information on the supplemental form 19); perform flowline pressure testing to verify integrity of repairs completed (retain chart & data) prior to returning flowline to service.	maclarej	04/26/2017
