H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: 24 in ppm (parts per million) Date of Measurement or Sample Collection 03/14/2017

Description of Sample Point:

The sample was collected from the sales line downstream of the production separator vessel and up stream of the sales line flow meter. The sampler was wearing a self-contained breathing apparatus while collecting the sample.

Absolute Open Flow Potential 114130 in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

The sales line does not flow to the atmosphere during normal operations. The only instance that it is open to the atmosphere is when de-pressurizing the sales line. The exact duration cannot be stated because it depends on the volume of fluid in the line.

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: 6508 FEET

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: 1153 FEET

COMMENTS:

The source of the hydrogen sulfide (H₂S) was determined to be the production separator associated with this well. In response, it was treated with H₂S scavenger after field measurements confirmed the presence of H₂S. The following day, March 15, 2017, the sales line was re-sampled via field measurement techniques and H₂S was not observed.
