

## Waste Management Plan Summary for Crescent Point Energy US Corporation

Crescent Point Energy US Corporation plan for appropriate handling of produced water, drill mud and cuttings, tank bottoms, and other associated exploration and production (E&P) wastes is described below:

- E&P wastes onsite will be stored in compatible containers or containment devices designed or engineered for purposes for which they will be utilized. These containers will be inspected on a regular basis to ensure that no undue wear, structural issues, sever rust, or other defects, which may impact their effectiveness.
- E&P wastes will be transported offsite via truck by licensed transporter. Frequency of these operations will vary by site based on waste volumes and ongoing operations.
- Any soils contaminated by E&P waste will be disposed of by a licensed third-party disposal facility/landfill or at a COGCC approved land farm. Tank bottoms will be disposed of at licensed third-party disposal facilities/land farms. Liquid wastes such as flowback fluid and produced water will be disposed of at licensed third party injection facilities.
- All drilling wastes such as drill cutting, water based drilling fluids, and oil based drilling fluids will be taken offsite for disposal at a COGCC approved facility.
