Fax:

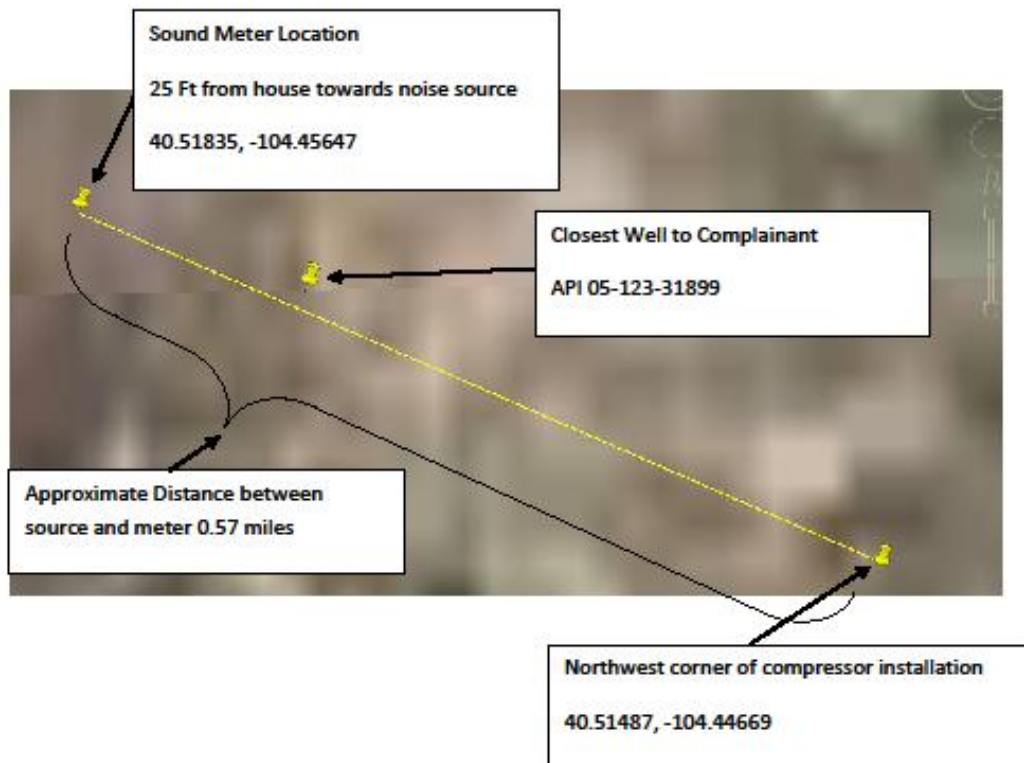

Nature of complaint: sound (c scale)

Inspection details: Complainant was contacted by Field Inspector Coner P at time of inspection.

Noise emissions were within c scale permitted levels. Survey report attached to inspection document.

Weeds at wellhead require maintenance and follow up inspection.

Suggest referral to Enforcement Group for possible further action: No

Complainant's Statement:

Location of concern: Southeast of my house sits three large compressor units. They are very very loud and run 24 hours a day. I have contacted Noble energy over the past year and they keep telling me they are working on it. It seems to be getting worse it actually vibrates my house. CACHE - USX AA #5-17 (API#123-25487) and CACHE - USX AA #5-23 (API# 123-24588).

Issue: Noise, It is specifically three large compressors at the site just east of my house. I think would be very simple to put sheds around them. I work for Plains marketing and we have to put sheds up around the machine like that. Noble energy does that everywhere else it seems but that location. Three compressor units that need sheds built around them to control the noise. Operator is Noble energy I have spoke with a guy named Brian supposedly is the lead Pumper.

Noise is described as noise you hear and feel, from compressors, continuous, blowing, noise started on 4/29/16, and noise typically occurs 24 hours a day.
